

Task 23

App Modularization & Task Distribution

Team SK, PR

1. Updating the User Interface according Task 22 (suggested on 10.04.25)
2. Issue: Saving GPX file - currently saved in sandbox environment only and make it exportable.
3. Making live measurements scrollable/extendable so all measurements can be seen
4. Work on graphs (make sure axis are shown correctly) (aesthetic improvements)
5. App/Sensors don't work inside the building (interrupted gps), This problem need to be handled (ex: show a message (gps lost..), etc..)
6. Make the code accessible for everyone so that everyone can work on their parts (or suggest improvements)
7. Android version still under development!
8. Maintain GitHub (some team should take responsibility to manage GitHub)
 - Combine all different code files into one
